LONE STAR SEED CO.

OLDEN, TEXAS

WHOLESALE ONLY

All prices are F. O. B. Olden or Eastland, Texas, and all shipments are made 2nd class express, which is cheaper than parcel post and guaranteed handling.

We sell collections only, and if special kinds of plants are wanted we refer you to other growers or will place your order for you. This does not apply to native hardy cacti, which we can furnish in any number of any certain variety or species.

Resurrection plants, \$1.00 per 100, \$9.00 per 1,000.

Satisfaction guaranteed or money refunded.

Cultural Directions—Good drainage is essential. Give plenty of light, but protect the plants from direct sunlight in summer time. They should have a raised bed if set outdoors or potted and pots plunged so they can be taken up readily for storage and protection through the winter months. Some cacti will stand temperatures below zero, especially those from the highlands of the Western States, these plants can ordinarily be left outside if given some protection through the winter months.

Water sparingly when they are dormant or resting if you would have profuse blooming when growth starts after rest period, which should be at least 2 to 3 months, preferably through the winter months.

For planting use a mixture of one-third coarse sand, one-third fine leaf mold, and one-third good garden soil, and if it does not contain lime, add hydrated lime and ground charcoal in small quantities.

Special instructions given on request for rock gardening and other growing conditions not generally covered by above instructions.

A simple method of setting cacti and succulents in pottery—Make up a quantity of soil, any good garden soil is all right, add a small amount of hydrated lime and mix with water until it is soft enough to barely pour. Remove most of the roots especially from cacti, and dip in hydrated lime, then fill container with mud and push plant into position, cover soil with crushed rock or shells and let dry. In the case of cacti, do not water any more for at least a month. Some succulents will stand a large amount of water, but it is best to water sparingly until plants show signs of new growth.
